HOW TO GROW YOUR OWN SUNFLOWER

WHAT YOU NEED: • **PLANT POT** • **SOIL** • **SEED** • **PLANT SPRAYER**

Grab a pot and half fill it with soil.

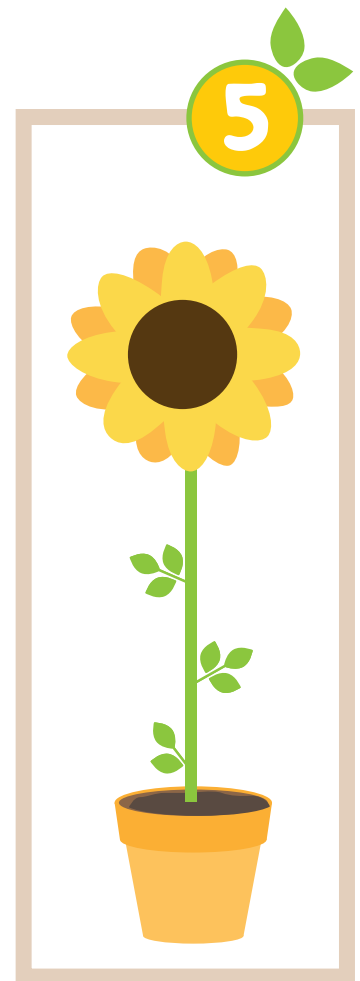

Make a hole in the middle with your finger.
Pop in a seed and press down gently.
Top up your pot with soil.

Grab a plant sprayer and moisten the soil.
Keep it in a sunny spot and water it every day.

After 1-2 weeks it
should start to peek
through the soil.

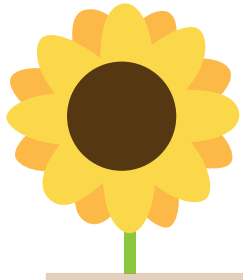

When it gets too big
move it to a bigger pot,
or into your garden.

USE YOUR OBSERVATIONAL JOURNAL TO MONITOR YOUR SUNFLOWERS PROGRESS.
KEEP MEASURING, IT MAY GROW TALLER THAN YOU!

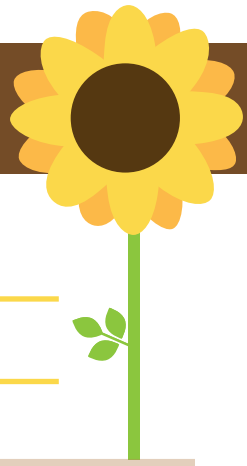

DON'T FORGET TO SHARE YOUR PICTURE'S ON OUR
FACEBOOK PAGE, WE WOULD LOVE TO SEE THEM!
